

Eigen::SparseLU::adjoint

Eigen::SparseLU::transpose

Eigen::SparseLUTranspose
View::setIsInitialized

```
graph LR; A[Eigen::SparseLU::adjoint] --> C[Eigen::SparseLUTranspose View::setIsInitialized]; B[Eigen::SparseLU::transpose] --> C;
```

The diagram illustrates a relationship between two Eigen library functions and a common target. On the left, two white rectangular boxes with black borders contain the text 'Eigen::SparseLU::adjoint' (top) and 'Eigen::SparseLU::transpose' (bottom). On the right, a gray rectangular box with a black border contains the text 'Eigen::SparseLUTranspose View::setIsInitialized'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both 'adjoint' and 'transpose' methods utilize or interact with the 'setIsInitialized' function of the 'Eigen::SparseLUTranspose View' class.
