

Eigen::SparseLU::adjoint

Eigen::SparseLU::transpose

Eigen::SparseLUTranspose
View::setSparseLU

```
graph LR; A[Eigen::SparseLU::adjoint] --> C[Eigen::SparseLUTranspose View::setSparseLU]; B[Eigen::SparseLU::transpose] --> C;
```

The diagram illustrates a mapping from two Eigen methods to a single function. On the left, two white rectangular boxes with black borders contain the text 'Eigen::SparseLU::adjoint' and 'Eigen::SparseLU::transpose'. On the right, a gray rectangular box with a black border contains the text 'Eigen::SparseLUTranspose' followed by 'View::setSparseLU' on a new line. Two blue arrows point from the right side of each white box to the left side of the gray box, indicating that both 'adjoint' and 'transpose' methods are implemented by or mapped to the 'setSparseLU' function within the 'Eigen::SparseLUTranspose View'.
