

absl::DereferenceFormatter

absl::PairFormatter

absl::AlphaNumFormatter

```
graph LR; A[absl::DereferenceFormatter] --> C[absl::AlphaNumFormatter]; B[absl::PairFormatter] --> C;
```

The diagram illustrates inheritance relationships between three C++ formatter classes. On the left, two white rectangular boxes represent the base classes: 'absl::DereferenceFormatter' (top) and 'absl::PairFormatter' (bottom). On the right, a gray rectangular box represents the derived class 'absl::AlphaNumFormatter'. Two blue arrows point from the right side of the base class boxes to the left side of the derived class box, indicating that both 'absl::DereferenceFormatter' and 'absl::PairFormatter' inherit from 'absl::AlphaNumFormatter'.
