

```
absl::internal_statusor  
::MoveCtorBase< T, bool >
```

The diagram illustrates an inheritance relationship. A light gray rectangular box at the top contains the text 'absl::internal_statusor::MoveCtorBase< T, bool >'. Below it, a white rectangular box contains the text 'absl::StatusOr< T >'. Two red arrows originate from the top of the white box and point upwards to the bottom of the gray box, indicating that 'absl::StatusOr< T >' inherits from 'absl::internal_statusor::MoveCtorBase< T, bool >'.

```
absl::StatusOr< T >
```
