

```
Eigen::internal::conservative  
_sparse_sparse_product_selector  
< Lhs, Rhs, ResultType, RowMajor,  
RowMajor, RowMajor >::run
```

```
graph LR; A["Eigen::internal::conservative  
_sparse_sparse_product_selector  
< Lhs, Rhs, ResultType, RowMajor,  
RowMajor, RowMajor >::run"] --> B["Eigen::internal::conservative  
_sparse_sparse_product_impl"]; B --> C["Eigen::numext::log2"]
```

The diagram illustrates a sequence of three operations. The first operation, highlighted with a grey background, is a function call to `Eigen::internal::conservative_sparse_sparse_product_selector` with five arguments: `Lhs`, `Rhs`, `ResultType`, `RowMajor`, and `RowMajor`, followed by `::run`. A blue arrow points from this box to a second box containing `Eigen::internal::conservative_sparse_sparse_product_impl`. Another blue arrow points from the second box to a third box containing `Eigen::numext::log2`.

```
Eigen::internal::conservative  
_sparse_sparse_product_impl
```

```
Eigen::numext::log2
```
