

Eigen::internal::pceil
< Packet4bf >

Eigen::internal::pceil
< Packet8bf >

Eigen::internal::pceil
< Packet4f >

```
graph LR; A["Eigen::internal::pceil< Packet4bf >"] --> C["Eigen::internal::pceil< Packet4f >"]; B["Eigen::internal::pceil< Packet8bf >"] --> C;
```

The diagram illustrates a relationship between three Eigen packet types. On the left, there are two white rectangular boxes. The top box contains the text 'Eigen::internal::pceil' followed by '< Packet4bf >' on the next line. The bottom box contains 'Eigen::internal::pceil' followed by '< Packet8bf >' on the next line. On the right, there is a gray rectangular box containing 'Eigen::internal::pceil' followed by '< Packet4f >' on the next line. Two blue arrows point from the right side of the two white boxes to the left side of the gray box, indicating that both Packet4bf and Packet8bf are inputs or related to Packet4f.
