

absl::str_format_internal
::FormatConvertImpl

absl::str_format_internal
::FormatSinkImpl::PutPaddedString

absl::str_format_internal
::Excess

```
graph LR; A[absl::str_format_internal::FormatConvertImpl] --> C[absl::str_format_internal::Excess]; B[absl::str_format_internal::FormatSinkImpl::PutPaddedString] --> C;
```

The diagram illustrates a call graph where two functions, `absl::str_format_internal::FormatConvertImpl` and `absl::str_format_internal::FormatSinkImpl::PutPaddedString`, both point to a common target function, `absl::str_format_internal::Excess`. The target function is highlighted in a gray box, while the source functions are in white boxes with black borders. Blue arrows indicate the direction of the calls from the source functions to the target function.
