absl::SimpleHexAtoi

```
graph LR; A["absl::flags_internal::AbslParseFlag"] --> C["absl::SimpleHexAtoi"]; B["absl::flags_internal::AbslParseFlag"] --> C;
```

The diagram illustrates two separate calls to the `absl::flags_internal::AbslParseFlag` function, both of which point to the `absl::SimpleHexAtoi` function. The source boxes are white with black text, while the target box is gray with black text. Blue arrows indicate the flow of execution from the source functions to the target function.
