

Eigen::HybridNonLinearSolver
::solveNumericalDiffOneStep

Eigen::HybridNonLinearSolver
::solveOneStep

Eigen::internal::r1updt

```
graph LR; A[Eigen::HybridNonLinearSolver::solveNumericalDiffOneStep] --> C[Eigen::internal::r1updt]; B[Eigen::HybridNonLinearSolver::solveOneStep] --> C;
```

The diagram illustrates a dependency or call relationship. Two white rectangular boxes on the left represent different solver methods: 'Eigen::HybridNonLinearSolver::solveNumericalDiffOneStep' (top) and 'Eigen::HybridNonLinearSolver::solveOneStep' (bottom). Two blue arrows originate from the right side of these boxes and point towards a single gray rectangular box on the right labeled 'Eigen::internal::r1updt'. This indicates that both solver methods utilize the 'r1updt' routine internally.
