

Eigen::internal::pmin  
< PropagateNaN, PacketXf >

```
graph LR; A["Eigen::internal::pmin< PropagateNaN, PacketXf >"] --> B["Eigen::internal::pmin< PacketXf >"]
```

The diagram illustrates a transformation or specialization process. On the left, a grey rectangular box contains the text 'Eigen::internal::pmin' followed by '< PropagateNaN, PacketXf >' on the next line. A blue arrow points from this box to a white rectangular box on the right. The white box contains the text 'Eigen::internal::pmin' followed by '< PacketXf >' on the next line. This represents the removal of the 'PropagateNaN' template parameter in a specialized version of the function.

Eigen::internal::pmin  
< PacketXf >
