

absl::flags_internal
::DynValueDeleter::operator()

absl::flags_internal
::FlagState::~~FlagState

absl::flags_internal
::Delete

```
graph LR; A["absl::flags_internal::DynValueDeleter::operator()"] --> C["absl::flags_internal::Delete"]; B["absl::flags_internal::FlagState::~~FlagState"] --> C;
```

The diagram illustrates a relationship between three C++ functions. On the left, two white rectangular boxes with black borders contain the function signatures: 'absl::flags_internal::DynValueDeleter::operator()' (top) and 'absl::flags_internal::FlagState::~~FlagState' (bottom). On the right, a gray rectangular box with a black border contains the target function signature: 'absl::flags_internal::Delete'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both the 'operator()' and the '~FlagState' destructor call the 'Delete' function.
