

```
absl::str_format_internal  
::UnboundConversion::InputValue  
    ::set_value
```

A diagram illustrating a transformation. On the left, a gray box contains the code `absl::str_format_internal::UnboundConversion::InputValue::set_value`. A blue arrow points from this box to a white box on the right. The white box contains the code `absl::str_format_internal::UnboundConversion::InputValue::value`. This represents a change from a function call to a field access.

```
absl::str_format_internal  
::UnboundConversion::InputValue::value
```
