

```
Eigen::internal::evaluator  
_base< Product< Lhs, Rhs,  
LazyProduct > >
```

The diagram illustrates the relationship between two Eigen classes. At the bottom is a gray box containing the definition of `Eigen::internal::product_evaluator`. Two blue arrows point upwards from this box to a white box at the top, which contains the definition of `Eigen::internal::evaluator`. This indicates that `product_evaluator` inherits from `evaluator`.

```
Eigen::internal::product  
evaluator< Product< Lhs,  
Rhs, LazyProduct >, ProductTag,  
DenseShape, DenseShape >
```
