Eigen::internal::pbroadcast4
< Packet4i >

Eigen::internal::pbroadcast4
_common

```
graph LR; A["Eigen::internal::pbroadcast4< Packet4f >"] --> C["Eigen::internal::pbroadcast4_common"]; B["Eigen::internal::pbroadcast4< Packet4i >"] --> C;
```

The diagram illustrates a common base for two Eigen broadcast functions. On the left, two white boxes represent specific broadcast functions: 'Eigen::internal::pbroadcast4 < Packet4f >' (top) and 'Eigen::internal::pbroadcast4 < Packet4i >' (bottom). Blue arrows point from each of these boxes to a single gray box on the right labeled 'Eigen::internal::pbroadcast4 _common', indicating that both specific functions inherit from or share a common base with this common function.
