

absl::uniform_int_distribution
::operator()

absl::uniform_int_distribution
::operator()

absl::uniform_int_distribution
::param

```
graph LR; A[absl::uniform_int_distribution::operator()] --> C[absl::uniform_int_distribution::param]; B[absl::uniform_int_distribution::operator()] --> C;
```

The diagram illustrates a mapping from two function calls to a single parameter. On the left, there are two identical boxes, each containing the text 'absl::uniform_int_distribution::operator()'. Blue arrows point from the right side of each of these boxes to the left side of a single box on the right. This box contains the text 'absl::uniform_int_distribution::param'. The box on the right is shaded gray, while the boxes on the left are white with black borders.
