

`std::true_type`

The diagram illustrates that the `std::true_type` type is derived from the `absl::container_internal::IsTransparent` trait. Two blue arrows point from the trait name in the bottom box to the `std::true_type` box above it.

```
absl::container_internal  
::IsTransparent< T, absl  
::void_t< typename T::is  
_transparent > >
```
