

Eigen::internal::pexpm1  
< Packet4f >

Eigen::internal::pexpm1  
< Packet8f >

Eigen::internal::generic  
\_expm1

```
graph LR; A[Eigen::internal::pexpm1< Packet4f >] --> C[Eigen::internal::generic_exp1]; B[Eigen::internal::pexpm1< Packet8f >] --> C;
```

The diagram illustrates the relationship between three Eigen internal functions. On the left, there are two white boxes with black borders. The top box contains the text 'Eigen::internal::pexpm1' followed by '< Packet4f >' on the next line. The bottom box contains 'Eigen::internal::pexpm1' followed by '< Packet8f >' on the next line. On the right, there is a gray box with a black border containing the text 'Eigen::internal::generic' on the top line and '\_exp1' on the bottom line. Two blue arrows point from the right side of the left boxes to the left side of the gray box. One arrow originates from the right side of the top white box and points to the left side of the gray box. The other arrow originates from the right side of the bottom white box and points to the left side of the gray box.
