

```
Eigen::internal::conservative  
_sparse_sparse_product_selector  
< Lhs, Rhs, ResultType, RowMajor,  
RowMajor, ColMajor >::run
```

```
graph LR; A["Eigen::internal::conservative  
_sparse_sparse_product_selector  
< Lhs, Rhs, ResultType, RowMajor,  
RowMajor, ColMajor >::run"] --> B["Eigen::internal::conservative  
_sparse_sparse_product_impl"]; B --> C["Eigen::numext::log2"]
```

The diagram illustrates a three-step process. The first step, highlighted with a grey background, is the execution of the `Eigen::internal::conservative_sparse_sparse_product_selector` function with parameters `Lhs`, `Rhs`, `ResultType`, `RowMajor`, `RowMajor`, and `ColMajor`. This step leads to the second step, which is the execution of `Eigen::internal::conservative_sparse_sparse_product_impl`. The final step is the execution of `Eigen::numext::log2`.

```
Eigen::internal::conservative  
_sparse_sparse_product_impl
```

```
Eigen::numext::log2
```
