

absl::flags\_internal  
::Unparse

absl::flags\_internal  
::Unparse

absl::flags\_internal  
::UnparseFloatingPointVal

```
graph LR; A[absl::flags_internal::Unparse] --> C[absl::flags_internal::UnparseFloatingPointVal]; B[absl::flags_internal::Unparse] --> C;
```

The diagram consists of three rectangular boxes. On the left, there are two white boxes with black borders, each containing the text 'absl::flags\_internal' on the top line and '::Unparse' on the bottom line. On the right, there is a single gray box with a black border containing the text 'absl::flags\_internal' on the top line and '::UnparseFloatingPointVal' on the bottom line. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating a mapping or relationship between the two 'Unparse' functions and the 'UnparseFloatingPointVal' function.
