

Eigen::internal::pceil  
< Packet16bf >

Eigen::internal::pceil  
< Packet16h >

Eigen::internal::pceil  
< Packet16f >

```
graph LR; A["Eigen::internal::pceil< Packet16bf >"] --> C["Eigen::internal::pceil< Packet16f >"]; B["Eigen::internal::pceil< Packet16h >"] --> C;
```

The diagram illustrates a relationship between three Eigen internal functions. On the left, there are two white rectangular boxes. The top box contains the text 'Eigen::internal::pceil' followed by '< Packet16bf >' on the next line. The bottom box contains 'Eigen::internal::pceil' followed by '< Packet16h >' on the next line. On the right, there is a gray rectangular box containing 'Eigen::internal::pceil' followed by '< Packet16f >' on the next line. Two blue arrows point from the right side of the two white boxes to the left side of the gray box, indicating that both 'Packet16bf' and 'Packet16h' versions of the function are related to or mapped to the 'Packet16f' version.
