

absl::any::operator=

absl::any::operator=

absl::any::swap

```
graph LR; A[absl::any::operator=] --> C[absl::any::swap]; B[absl::any::operator=] --> C;
```

The diagram illustrates a relationship between two operator functions and a swap function. On the left, there are two identical white rectangular boxes, each containing the text 'absl::any::operator='. Blue arrows point from the right side of each of these boxes to a single gray rectangular box on the right, which contains the text 'absl::any::swap'.
