

Eigen::internal::print
< Packet16bf >

Eigen::internal::print
< Packet16h >

Eigen::internal::print
< Packet16f >

```
graph LR; A["Eigen::internal::print< Packet16bf >"] --> C["Eigen::internal::print< Packet16f >"]; B["Eigen::internal::print< Packet16h >"] --> C;
```

The diagram illustrates a mapping or transformation. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'Eigen::internal::print' followed by '< Packet16bf >' on the next line. The bottom box contains 'Eigen::internal::print' followed by '< Packet16h >' on the next line. Two blue arrows originate from the right side of these boxes. The arrow from the top box points to the top-left corner of a gray rectangular box on the right. The arrow from the bottom box points to the top-left corner of the same gray box. The gray box contains the text 'Eigen::internal::print' followed by '< Packet16f >' on the next line.
